DEPLOYMENT

(A) XCOPY Deployment

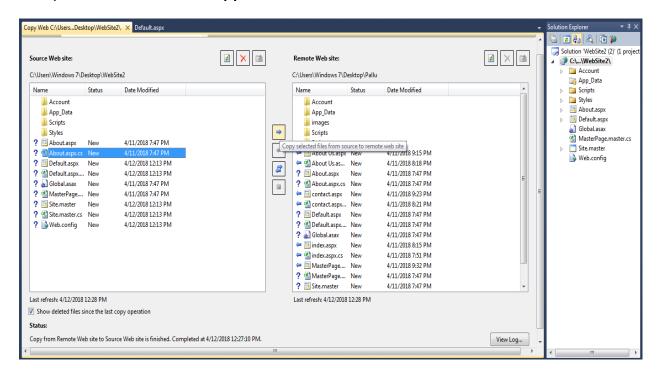

1.) In Visual Studio, Open the website you want to deploy and choose the website->copy web site command

2.) Click the connect button to display an Open Web Site Dialog box that lets you choose the destination you want to copy the website to

3.) Click the -> button to copy the files from source website to the remote website

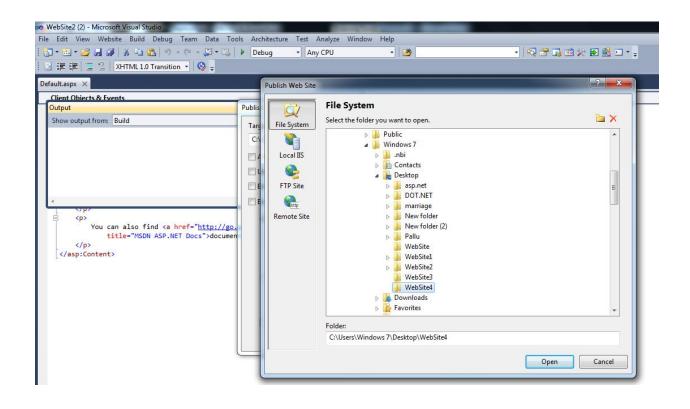

(B) Precompiled Deployment
Step 1: Open Publish Dialog
You can open the publish dialog by "Right Click" on the project, then selecting "Publish" on the floating menu.

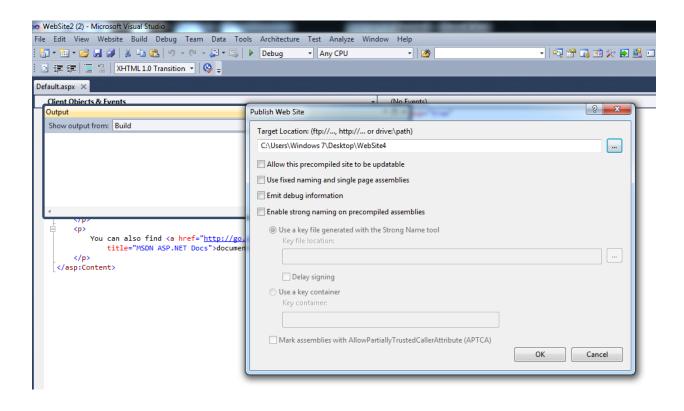

```

Step 2: Select the Connection.

In this step, we need to tell where our published files are going to be. You can publish the files directly on your server also by selecting "Web Deploy" publish method or you can use FTP too

Step 3: After Selecting where our files will be published, Select Ok

Step 4: Your Website has been successfully published
